Index to volume 29 (1989)

Articles (titles in italics refer to Research and technical notes)

January (pp 1–80)

Conductor design issues for oxide superconductors. Part 1: criteria of magnetic stability
T. Ogasawara 3–5

Conductor design issues for oxide superconductors. Part 2: exemplification of stable conductors
T. Ogasawara 6–7

Experimental study of thermomagneto-mechanical instabilities in superconducting composites. Part 1: magnetic flux jumps induced by plastic deformation
V.I. Dotsenko, I.F. Kislyak and N.M. Chaykovskaya 10–15

Experimental study of thermomagneto-mechanical instabilities in superconducting composites. Part 2: dynamics of normal zones
V.I. Dotsenko, I.F. Kislyak and N.M. Chaykovskaya 16–21

Passive correction of long transverse-field dipole magnets
J.H. Coupland 22–24

Numerical analysis of quench transients in forced-flow cooled superconductors
S. Sekiya and A. Ichikawa 25–30

Channel orientation and geometry influence on heat transfer with two-C phase forced flow of nitrogen
V.V. Klimenko, M.V. Fyodorov and Yu. A. Fomichyov 31–36

Heat transfer in a rotating cryostat at high centrifugal acceleration fields
M.O. Lutset and V.E. Zhukov 37–41

Vapour-liquid equilibria in the ternary mixture N_2-CH_4-CO_2 and the quaternary mixture N_2-CH_4-C_2H_6-C_3H_8
G. Trappehl and H. Knapp 42–50

Sensitive method for determining thermal conductivity of pure metals at low temperatures
D. Fonteyn and G. Pitsi 51–54

Autocompensating device for ultra-low temperature measurements
Yu. F. Kiselev, A.N. Chernikov, N.L. Gorodishenin, V.A. Evdokimov and S.S. Katushonok 55–88

Exergy maximization in refrigeration strorage units with heat leak
R.K. Sahoo 59–64

Phase equilibria from the one-fluid model
K.D. Romig. Jr and H.J.M. Hanley 65–67

Properties of helium gas and vapour below the lambda temperature
U. Schmidtchen 67–68

Simple and very sensitive set-up for superconductivity magnetization measurements on tubular samples
M.R. Cimberle, C. Ferdeghini and A.S. Siri 69–70

Device for removal of solid impurities from liquid nitrogen
J.D. Brownridge 70–71

Capillary flow impedances for the dilution refrigerator
W. Wei and R. Rosenbaum 71–72

February (pp 81–152)

Construction and parameters of the first high T_c superconducting ceramic magnets for small fields
I. Kirschner, J. Mátrai, G. Szentgyörgyi, T. Porjesz, M. Lamm, I. Molnár, Gy. Kovács, T. Träger, P. Lukács, T. Kárman, J. György, M. Takács and G. Zsolt 83–86

Superconducting and metallurgical properties of Nb_3Sn wires processed by internal tin route including hydrostatic extrusion
J.-Q. Xu W. Specking, B. Obst, E. Seibt and R. Flükiger 87–95

Strain dependence of the critical current of Nb_3Sn superconductors doped with Hf and Ga
H. Sekine, K. Inoue, T. Kuroda and K. Tachikawa 96–100

Calculations on the current density and the voltage-current relation under a.c. conditions of filaments
R.A. Hartmann, D. Dijkstra, F.P.H. van Beckum and L.J.M. van de Klundert 101–108

Transient stability of a Nb-Ti cable-in-conduit superconductor: experimental results
P.E. Phelan, Y. Iwasa, Y. Takahashi, H. Tsuji, M. Nishi, E. Tada, K. Yoshida and S. Shimamoto 109–118

A.c. losses in superconducting ternary and quaternary Laves phase compounds
V.T. Kovachev, E.S. Vlakhov, K.A. Nenkov, D. Dew-Hughes, P.G. Quincey and P.L. Upadhyay 119–123

Tribological properties at temperatures of 293, 77 and 4 K in fretting
A. Iwabuchi, T. Honda and J. Tani 124–131

Distortion of temperature signals in He 11 due to probe geometry, and a new improved probe
M.v. Schwerdtner, W. Poppe and D.W. Schmidt 132–134

He-3 constant volume gas thermometer as interpolating instrument: calculations of the accuracy limit *versus* temperature range and design parameters
P.P.M. Steur and F. Pavese 135–138

Values of critical energy for superconducting composites
R. Jayakumar 139–145

March (pp 153–224)

Novel magnetometer using ceramic superconducting material as probe
D.M.S. Bagguley, A.C. de Oliveira and O.F. Schilling 155–156

Prediction of current decay and terminal voltages in adiabatic superconducting magnets
C.H. Joshi and Y. Iwasa 157–167

Composed superconductors with porous coating
V.V. Andrianov, V.P. Baev, S.P. Malyshenko, R.G. Muchnik and M.B. Parizh 168–178

Transient cooling of an internally cooled superconducting magnet
R.J. van der Linden and C.J. Hoogendoorn 179–187

Quench energies of composite superconductors
A. Vl. Gurevich, R.G. Mints and A.A. Pukhov 188–190

4 K Fracture toughness investigations of 316 LN stainless steel plate and forging materials
A. Nyilas and H. Yanagi 191–195

Axial conductivity and heat exchangers in a hybridized Gifford-McMahon cryocooler
E. Borchi, M. Zoli, A. Frigo and L. Lombardini 196–199

Temperature and heat flux measurements in noiseless film boiling in superfluid helium with a flat heater
J. Maza, F. Jebali, M.X. Francois and F. Vidal 200–202

Pool boiling heat transfer of liquid ^3He
M. Tanaka and T. Kodama 203–205

Superconducting current-leads made from high T_c superconductor and normal metal conductor
F.J. Mumford 206–207

Absence of the light effect in ultrasonic cavitation in liquid helium
E. Bodegom, J.A. Nissen, J.S. Semura and L.C. Brodie 207–209

Computer controlled low temperature resistance measurements
E. Baciocco, C. Boragno and U. Valbusa 209–210

Simple device for measurement of transport properties of new high temperature superconductors
P. Svoboda 210–211

March Supplement (pp 225-408)

Special Issue: International Conference on Critical Currents in High-Temperature Superconductors, Snowmass Village, Colorado, USA, 16–19 August 1988

Pinning force of twin planes or grain boundaries in high T_c superconductors
P.H. Kes, A. Pruymboom, J. van den Berg and J.A. Mydosh 228–231

Flux-line shear studied in artificially structured superconducting double layers
A. Pruymboom, P.H. Kes, E. van der Drift and S. Radelaar 232–235

Elementary pinning potentials in superconductors with anistropic Fermi surface
E.V. Thuneberg 236–244

Index to volume 29 (1989)

R.J. van der Linden and C.J. Hoogendoorn 179–187

Quench energies of composite superconductors
A. Vl. Gurevich, R.G. Mints and A.A. Pukhov 188–190

4 K Fracture toughness investigations of 316 LN stainless steel plate and forging materials
A. Nyilas and H. Yanagi 191–195

Axial conductivity and heat exchangers in a hybridized Gifford-McMahon cryocooler
E. Borchi, M. Zoli, A. Frigo and L. Lombardini 196–199

Temperature and heat flux measurements in noiseless film boiling in superfluid helium with a flat heater
J. Maza, F. Jebali, M.X. Francois and F. Vidal 200–202

Pool boiling heat transfer of liquid ^3He
M. Tanaka and T. Kodama 203–205

Superconducting current-leads made from high T_c superconductor and normal metal conductor
F.J. Mumford 206–207

Absence of the light effect in ultrasonic cavitation in liquid helium
E. Bodegom, J.A. Nissen, J.S. Semura and L.C. Brodie 207–209

Computer controlled low temperature resistance measurements
E. Baciocco, C. Boragno and U. Valbusa 209–210

Simple device for measurement of transport properties of new high temperature superconductors
P. Svoboda 210–211

March Supplement (pp 225-408)

Special Issue: International Conference on Critical Currents in High-Temperature Superconductors, Snowmass Village, Colorado, USA, 16–19 August 1988

Pinning force of twin planes or grain boundaries in high T_c superconductors
P.H. Kes, A. Pruymboom, J. van den Berg and J.A. Mydosh 228–231

Flux-line shear studied in artificially structured superconducting double layers
A. Pruymboom, P.H. Kes, E. van der Drift and S. Radelaar 232–235

Elementary pinning potentials in superconductors with anistropic Fermi surface
E.V. Thuneberg 236–244

Saturation to nonsaturation transition of macroscopic pinning force in superconductors
K. Yamafuji, T. Fujiyoshi, K. Toko and T. Matsushita 245–250
Geometrically large flux-line pins
H.R. Kerchner 251–257
Magnetic properties of YBaCuO and BiSrCaCuO crystals: a comparative study of flux creep and irreversibility
Y. Yeshurun, A.P. Malozemoff, T.K. Worthington, R.M. Yandrofski, L. Krusin-Elbaum, F.H. Holtzberg, T.R. Dinger and G.V. Chandrashekhar 258–262
Anisotropy and hysteresis for transport critical currents in high temperature Ln-Y-Ba-Cu-O superconductors
K. Watanabe, K. Noto, H. Morita, H. Fujimori, K. Mizuno, T. Aomine, B. Ni, T. Matsushita, K. Yamafuji and Y. Muto 263–267
Intragrain junctions in $YBa_2Cu_3O_{7-x}$ ceramics and single crystals
H. Kupfer, I. Apfelstedt, R. Flükiger, C. Keller, R. Meier-Hirmer, B. Runtsch, A. Turowski, U. Wiech and T. Wolf 268–280
Magnetic hysteresis and critical current densities of polycrystalline $REBa_2Cu_3O_{7-y}$
Y. Xu, W. Guan, K. Zeibig and C. Heiden 281–285
Critical currents and magnetic properties of Bi- and Tl-based new high T_c superconductors
K. Togano, H. Kumakura and D.R. Dietderich 286–290
High critical currents in polycrystalline Tl-Ca-Ba-Cu-O films
J.F. Kwak, E.L. Venturini, R.J. Baughman, B. Morosin and D.S. Ginley 291–295
Study on low temperature processing for rare-earth-free high T_c superconducting thin films
K. Setsune, Y. Ichikawa, T. Kamada, K. Hirochi, H. Adachi, S. Kohiki and K. Wasa 296–303
Electromagnetic properties of ultra-fine filamentary superconductors
J.R. Cave 304–311
Critical current densities of multifilamentary Nb_3Sn composite conductors with fine filaments
Y. Kubota, K. Yasohama and T. Ogasawara 312–316
Critical current density of superconducting Nb-Ti tapes in a longitudinal magnetic field
F. Irie, T. Matsushita, S. Otabe, T. Matsuno and K. Yamafuji 317–320
Peak effects in two- and three-dimensional collective pinning
R. Wördenweber and P.H. Kes 321–327
Nonsaturated pinning characteristics by normal precipitates in superconducting Nb-Ta
T. Matsushita, N. Harada and K. Yamafuji 328–333
Critical currents in bulk samples of $YBa_2Cu_3O_7$ and $DyBa_2Cu_3O_7$
J. Aponte, H. Abache and M. Octavio 334–337
Flux line pinning in $YBa_2Cu_3O_{7-\delta}$ observed with a vibrating bar
D.J. Baar, S. Graham, J.P. Harrison and V. Storm 338–340
Electromagnetic properties of sintered YBaCuO superoconductors: critical current densities, transport currents and a.c. losses
J.R. Cave, M. Mautref, C. Agnoux, A. Leriche and A. Février 341–346
Critical currents of aligned grains of Tl–Ba–Ca–Cu–O compounds
M.M. Fang, D.K. Finnemore, D.E. Farrell and N.R. Bansal 347–349
Y-Sm twinned and untwinned high temperature superconductors: a comparative study
X. Granados, M. Carrera, X. Obradors, N. Ferrer, J. Fontcuberta, F. Lera, C. Rillo, J. Bartolomé, R. Navarro, M. Vallet, M.V. Cabanas and J.M. González-Cablet 350–354
Experimental study of the ultimate limit of flux pinning and critical currents
K.E. Gray, R.T. Kampwirth, D.W. Capone II and J.M. Murduck 355–357
Automated superconductor critical current measurement with an economical and accurate PC-based system
M. Hatziprokopiou and M.N. Pitsakis 358–360
Pinning force densities of continuous ultra-fine Nb_3Al multifilamentary conductor
K. Inoue, T. Takeuchi, Y. Iijima and M. Kosuge 361–366
Computer simulations of flux pinning and flux flow in two dimensions
H.J. Jensen, A. Brass, Y. Brechet and A.J. Berlinsky 367–372
Comparison of flux line cutting behaviour in high T_c and conventional type II superconductors
G. Gandolfini, M.A.R. LeBlanc and J. Sekerka 373–378
Diamagnetism and critical currents of Bi–Ca–Sr–Cu–O samples
F. Lera, C. Rillo, R. Navarro, J. Bartolomé, X. Obradors, J. Fontcuberta, X. Granados, M. Carrera, M. Vallet, J. González-Calbet, J. Rodriguez and M. Medarde 379–383
Theoretical estimate of critical transport current density in polycrystalline oxide superconductors
T. Matsushita, B. Ni and K. Yamafuji 384–387
Andreev reflections and critical currents in high T_c superconductors
R. Nicolsky 388–391
Current carrying ability of $YBa_2Cu_3O_{7-y}$: high magnetic field influence
V.M. Pan, S.V. Gaponov, G.G. Kaminsky, D.V. Kuzin, V.I. Matsui, V.I. Prokhorov, M.D. Strikovsky and C.G. Tretiatchenko 392–396
Microwave studies of intergranular magnetic flux
A.M. Portis and K.W. Blazey 397–398
Critical current limitations in ceramic oxide superconductors
R.B. Stephens 399–404
Magnetic shielding properties and transport currents of oxide superconductors
A. Yahara and H. Matsuba 405–408

April (pp 409–480)

Non-contact determination of critical current densities in a superconducting $YBa_2CU_3O_y$ cylinder
C.C. Welch and B.R. Barnard 411–414
Change of electromagentic properties of superconducting R–Ba–Cu–O (R = Y and Er) compounds by addition of fluorine
Y. Hakuraku, F. Sumiyoshi, K. Kittaka, T. Hamada, S. Kawabata and T. Ogushi 415–417
New superconducting Nb_3Al MF wire made by Nb/Al–Mg composite process
K. Inoue, Y. Iijima and T. Takeuchi 418–422
Increase in coupling-current losses of superconducting cables due to first-stage cabling Part 2: optimum structure of solder-impregnated sub-cable with normal-metal strands
K. Funaki, O. Ichimaru, M. Iwakuma, F. Sumiyoshi, K. Miyahara and K. Yamafuji 423–428
Superconducting films formed by atomized eutectic solder alloy powders
M. Sato, H. Kimura, T. Numazawa, H. Suga and H. Maeda 429–430
Characteristics of forced flow superfluid helium circulation system
S. Fuchino and N. Tamada 432–437
Flow visualization study of thermal counterflow jet in He II
M. Murakami and N. Ichikawa 438–443
Limit of transient heat absorption by superfluid helium for very large heat pulses
B.A. Danilchenko, M.O. Lutset, V.N. Poroshin 444–447
Influence of transverse magnetic field on breakdown characteristics of vacuum, gaseous helium at low temperature and liquid helium
M. Hara, H. Shigematsu, S. Yano, K. Yamafuji, M. Takeo and K. Funaki 448–456
Thermal resistance between ^3He–^4He mixture and sintered silver
V. Benda 457–459
Pool boiling heat transfer to liquid nitrogen from porous metallic coatings of tube bundles and experimental research of hysteresis phenomenon
Y. Xiulin, X. Hongji, Z. Yuweng and Q. Hongzhang 460–462
Experimental setup for the study of thermal conductivity of elastomeric material at cryogenic temperature
T. Bhowmick and S. Pattanayak 463–466
Carbon and germanium resistors in the variable-range hopping regime for thermometry below 1 K
W. Schoepe, K. Uhlig, K. Neumaier 467–468

May (pp 481–584)

Special Issue: Space Cryogenics Workshop, Frascati, Italy, 18–19 July 1988

Cryogenic techniques for large superconducting magnets in space
M.A. Green 484–492
Superfluid Helium On-Orbit Transfer (SHOOT) operations
P. Kittel and M.J. DiPirro 493–497
Critical transport parameters for porous media subjected to counterflow
T.H.K. Frederking, F.A. Afifi and D.Y. Ono 498–502
Pressure drop and He II flow through fine mesh screens
J.R. Maddocks and S.W. Van Sciver 503–508
Bubble growth in superheated He II
L. Dresner 509–512
Superfluid helium acquisition system development
J.E. Anderson 513–516

Fluid acquisition system for superfluid helium
M.J. DiPirro 517–522
Design considerations for a micro-*g* superfluid helium fluid acquisition system
J.M. Lee 523–527
State of the art of ISO
J. Youdale 528–534
Cryogenic activities at ESTEC
C.I. Jewell 535–539
Analog multiplexer for cryogenic applications
L.M. Reyneri 540–545
Shutter for the Short Wavelength Spectrometer in ISO
K.J. Wildeman, G.R. Ploeger and D.A. Beintema 546–549
New developments with the cryogenic grating drive mechanisms for the ISO spectrometers
J.W.G. Aalders, K.J. Wildeman, G.R. Ploeger and Z.N. van der Meij 550–552
Design of cryogenic system for IRTS
M. Murakami, H. Okuda, T. Matsumoto, G. Fujii and M. Kyoya 553–558
Cryogenic vibration test set-up for space qualification
K.J. Wildeman and G.R. Ploeger 559–562
Performance in He II of a centrifugal pump with a jet pump inducer
D.E. Daney, P.R. Ludtke and A. Kashani 563–568
Carbon-carbon composite: a strong material with low thermal conductivity and thermal contact for rigid optical assemblies at low temperature
C. Blondel, R. Roquessalane, O.A. Testard, F. Latimier and D. Viratelle 569–571

June (pp 585–696)

Special Issue: Basic Mechanisms of Helium Heat Transfer and Related Stability of Superconducting Magnets, Fukuoka, Japan, 29 August–2 September 1988

Pool boiling heat transfer to saturated liquid helium from coated surface
G.R. Chandratilleke, S. Nishio and H. Ohkubo 588–592
Effects of diameter and system pressure on critical heat flux for horizontal cylinder in saturated liquid He I
M. Shiotsu, K. Hata and A. Sakurai 593–596
Quasi-steady nucleate boiling and its life caused by large stepwise heat input in saturated pool liquid He I
A. Sakurai, M. Shiotsu, K. Hata and Y. Takeuchi 597–601
Mechanisms of local thermal stability in high temperature superconductors
C.L. Tien, M.I. Flik and P.E. Phelan 602–609
Characteristic parameters of superconductor-coolant interaction including high T_c current density limits
T.H.K. Frederking 610–615
Stability analysis of superconducting magnet: an approach to quantification of energy disturbance caused by conductor motion
O. Tsukamoto, T. Takao and S. Honjo 616–620
Maddock criterion and minimum propagating zone
T. Ito and H. Kubota 621–624
Superconductor stability and helium heat transfer: the minimum propagating zone relationship in design
P.W. Eckels 625–629
Review of existing experimental findings on forced convection heat transfer to supercritical helium 4
D. Kasao and T. Ito 630–636
Study of the effects of copper to superconductor ratio on stability
W. V. Hassenzahl 637–641
Stability of 10T–(Nb–Ti)^{3}Sn forced flow cooled superconducting coil
F. Iida, N. Tada and H. Ogata 642–647
Thermal conductivity and critical current density in high T_c $Y_{1-x}Ln_xBa_2Cu_3O_{7-y}$
K. Noto, K. Watanabe, H. Morita, K. Mori, M. Sasakawa, Y. Isikawa, K. Sato, T. Ishihara, E. Inukai, H. Fujimori and Y. Muto 648–650
Superconductor stability in the powe. system environment
P.W. Eckels and J.L. Smith Jr 651–654
Stability of superconducting magnet indirectly cooled by He II
A. Sato, K. Ishito, S. Kabashima, S. Nakamura and E. Suzuki 655–658
Dynamic behaviour of pulsed magnets
T. Onishi, H. Tateishi and H. Nomura 659–663
Effect of counterflow on heat transfer to He II in a channel
H. Mori and H. Ogata 664–667
Stability margins of superconductors cooled with subcooled He II
L. Dresner 668–673
Stabilization enhancement for superconducting magnets by means of hydrostatically pressurized He II
H. Kobayashi, I. Tada, T. Kodama, M. Tanaka and H. Turuga 674–678
Forced flow He II in relation to stability of internally cooled superconductors
S.W. Van Sciver 679–682
Magnetic conditioning in superfluid
S. Caspi 683–685

July (pp 697–792)

Critical current measurements of Nb_3Sn superconductors: NBS contribution to the VAMAS interlaboratory comparison
L.F. Goodrich and S.L. Bray 699–709
The VAMAS intercomparison of critical current measurements in superconducting Nb_3Sn wires
K. Tachikawa 710–715
Temperature stablized sample stage for the investigation of high T_c superconductors by scanning electron microscopy
R. Gross, J. Bosch, H.-G. Wener, J. Fischer and R.P. Huebener 716–719
Magnetic method for H_{c2} measurement in pulsed fields: application to high T_c superconductors
F. Bolzoni 720-724
Structures and superconducting properties of Li–Ti oxide system
K. Tachikawa, T. Nakamura, K. Noda, Y. Aramaki and H. Yamamoto 725–730
Voltage *versus* current characteristics of high T_c superconductors described by a statistical series-parallel model
L. Cesnak, S. Takács and F. Gömöry 731–735
Critical currents and scaling law in CVD prepared Nb_3Ge superconductor alloyed with Al
K. Fröhlich and T. Melisek 736–740
Numerical calculation method of inter-strand coupling current losses in superconducting conductors
F. Sumiyoshi, H. Kasahara, T. Kawashima and T. Tanaka 741–747
Magnetoresistance: the Hall effect in composite aluminium cryoconductors
P.W. Eckels, N.C. Iyer, A. Patterson, A.T. Male, J.H. Parker, Jr and J.W. Coltman 748–752
Experimental study of energy release due to cracking of epoxy impregnated conductors
H. Yanagi, M. Sugimoto, K. Someya, K. Miya and J. Tani 753–757
Thermal conductivity of a machinable glass-ceramic below 1 K
D.A. Zych 758–759
Simple gadget for variable temperature electrical resistance measurement
S.B. Ota, T.V. Chandrasekhar Rao and V.C. Sahni 760–761
Reproducibility of industrial-grade platinum resistance thermometers type OPT 11
A. Szmyrka-Grzebyk 761–762

August (pp 793–872)

Contact problems in J_c measurements on high T_c superconductors
H. Jones, L. Cowey and D. Dew-Hughes 795–799
A.c. susceptibility and intergranular critical current density of high T_c superconductors
D.-X. Chen, J. Nogues and K.V. Rao 800–808
Biomagnetic multichannel system with integrated SQUIDs and first order gradiometers operating in a shielded room
H.E. Hoenig, G. Daalmans, W. Folberth, H. Reichenberger, S. Schneider and H. Seifert 809–813
Quench simulation analysis of a superconducting coil
K. Kuroda, S. Uchikawa, N. Hara, R. Saito, R. Takeda, K. Murai, T. Kobayashi, S. Suzuki and T. Nakayama 814–824
Stability of composite tape superconductors against transient thermal disturbances
T. Ogasawra 825–829
Downstream effect on stability in cable-in-conduit superconductor
E. Tada, Y. Takahashi, H. Tsuji, K. Okuno, T. Ando, T. Hiyama, K. Koizumi, M. Nishi, H. Nakajima, K. Yoshida, T. Kato, K. Kawano, M. Oshikiri, M. Yamaguchi and S. Shimamoto 830–840
Miniature refrigerators for cryogenic sensors and cold electronics
G. Walker, R. Fauvel and G. Reader 841–845
Microcomputer simulation of Stirling cryocoolers
G. Walker, M. Weiss, R. Fauvel and G. Reader 846–849
Valved pulse tube refrigerator development
R.N. Richardson 850–853
Low dead time 1 K cryostat
J. Talpe and V. Bekeris 854–856
Low-noise preamplifiers for 1 K operation using gallium arsenide of very low 1/f noise
D.V. Camin, G. Pessina, E. Previtali and G. Ranucci 857–862

September (pp 873–952)

Results of the international Large Coil Task: a milestone for superconducting magnets in fusion power
L. Dresner, W.A. Fietz, S. Gauss, P.N. Haubenreich, B. Jakob, T. Kato, P. Komarek, M.S. Lubell, J.W. Lue, J.N. Luton, W. Maurer, K. Okuno, S.W. Schwenterly, S. Shimamoto, Y. Takahashi, A. Ulbricht, G. Vécsey, F. Wüchner and J.A. Zichy 875–882

ISOCAM: a survey of cryogenic mechanism technology developed by CNRS/CEA
F. Sirou, B. Gillet, R. Glaise, J. Rollin, J. Cretolle and J.F. Bonnal 883–887

Thermal regenerator analysis: analytical solution for effectiveness and entropy production in regenerative process
K. Matsumoto and M. Shiino 888–894

Thermal bubble breakdown characteristics of LN_2 at 0.1 MPa under a.c. and impulse electric fields
M. Hara, D.J. Kwak and M. Kubuki 895–903

Impact welding: a superior method of producing joints with high thermal conductivity between metals at very low temperatures
R.W. Willekers, W.A. Bosch, F. Mathu, H.C. Meijer and H. Postma 904–906

Critical state model and the magnetic behaviour of high T_c superconductors
P. Chaddah, G. Ravi Kumar, A.K. Grover, C. Radhakrishnamurty and G.V. Subba Rao 907–914

Plasma sprayed high T_c superconducting magnetic shields
J. Karthikeyan, A.S. Paithankar, K.P. Sreekumar, N. Venkatramani and V.K. Rohatgi 915–919

Self field effects in the critical current measurements of superconducting wires and cables
P. Fabbricatore, R. Musenich, R. Parodi, S. Pepe and R. Vaccarone 920–925

Coupling losses in superconducting transposed conductors located in changing magnetic fields
V.E. Sytnikov, G.G. Svalov, S.G. Akopov and I.B. Peshkov 926–930

Role of size effect in the stabilization of *in situ* superconducting tapes
G. Horváth and J. Bánkuti 931–934

Diffusion of krypton in liquid argon at infinite dilution
K. Srinivasan 935–936

Magnetocaloric effect in thulium
C.B. Zimm, J.A. Barclay, H.H. Harkness, G.F. Green and W.G. Patton 937–938

Superconducting aluminium heat switch prepared by diffusion welding
Yu.M. Bunkov 938–939

October (pp 953–1032)

Influence of transverse compressive and axial tensile stress on the superconductivity of $PbMo_6S_8$ and $SnMo_6S_8$ wires
W. Goldacker, W. Specking, F. Weiss, G. Rimikis and R. Flükiger 955–960

H_{c1} determination in high T_c oxide superconductors
C. Xiaowen, H. Sunli, L. Hongbao, Z. Weijie and Z. Yuheng 961–962

Influence of filament spirality on current–voltage characteristics of twisted multifilamentary Nb–Ti superconductors
M. Polak, R.G. Mints and M. Majoros 963–970

Studies of current distribution in large-scale superconducting cables influenced by internal and external magnetic fields
V.E. Sytnikov, G.G. Svalov and I.B. Peshkov 971–974

Peculiarities of the thermal expansion in Ti–Nb alloy-based superconducting wire in the temperature range 5 to 300 K
V. A. Lototskaya, V.P. Popov, V.Ya. Ilichev and S.V. Stepanova 975–977

Measurement of electrical resistivity in high magnetic fields by the eddy current decay method
C.Y. Hua and K.T. Hartwig 978–981

Heat conductivity below 0.4 K of the glass-ceramic Macor and of Sta stainless steel
W.A. Bosch, R.W. Willekers, H.C. Meijer and H. Postma 982–984

Transient thermal and hydrodynamic processes in superfluid helium
S.K. Nemirovskii and A.N. Tsoi 985–994

Thermodynamic properties of nitrogen calculated from the BWR equation of state
T. Asami and H. Ebisu 995–997

Broad-neck liquid helium cryostat with a long lifetime
F.F. Mende, V.M. Gorbunov, N.N. Bondarenko, V. N. Logvinov and T.I. Zhuravel 998–1001

Quality of surface treatment and plastic deformation of titanium alloys at 2.5 to 293 K
V.N. Kovaleva and V.A. Moskalenko 1002–1005

On-resistance, thermal resistance and reverse recovery time of power MOSFETs at 77 K
O. Mueller 1006–1014

Experimental model of a flux pump
V.V. Vasiliev, V.N. Isaykin, O.D. Kanz' yuba, V.G. Kozorezov, V.A. Kulagi, V.Ya. Pakhomov and E.B. Klimova 1015–1017

Comment on superconducting fixed points and interpolations
J.E. Koster, D.G. Haase and R.G. Goodrich 1017–1019

November (pp 1033–1109)

New programmable switching and storage effects in superconducting polycrystalline $YBa_2Cu_3O_7$ due to hysteretic critical intergrain transport current
K. Kwasnitza and Ch. Widmer 1035–1041

Magnetization of composite superconductors
Y··. G. Kalmakhelidze and R.G. Mints 1041–1044

High Q tunable sapphire loaded cavity resonator for cryogenic operation
D.G. Blair and A.M. Sanson 1045–1049

Cryogenic microstrain measurement using laser light interference
T. Ohara, K. Agatsuma, K. Kaiho, T. Onishi and Y. Iwasa 1050–1056

Quench analysis in a 72 kVA superconducting four-winding power transformer
M. Iwakuma, K. Funaki, H. Kanetaka, K. Tasaki, M. Takeo, K. Yamafuji 1057–1064

Measurements of the viscosities of saturated and compressed fluid chlorotrifluoromethane (R13)
D.E. Diller and L.J. Van Poolen 1065–1068

Discharge coefficient of a classical venturi tube for measuring liquid helium flow
H. Katheder and M. Süsser 1069–1071

Time dependent heat transfer in pressurized superfluid helium
T. Okamura, Y. Yoshizawa, A Sato, K. Ishito, S. Kabashima and S. Shioda 1072–1076

Temperature dependence of the energy and entropy of fluid systems
A. Elsner 1077–1085

Design of regenerators for a Gifford-McMahon cycle cryorefrigerator
P.K. Kush and M. Thirumaleshwar 1086–1093

Fitting and interpolating calibration data for carbon-glass thermometers
D.J. Gillespie and A.C. Ehrlich 1094–1097

Proximity effect and Josephson tunnelling: application to high T_c films
V.Z. Kresin 1098–1100

December (pp 1110–1192)

High temperature superconducting current leads for cryogenic apparatus
J.R. Hull 1116–1123

Electrical contacts to YBCO using metal spray techniques
S.P. Ashworth, C. Beduz, K. Harrison, R. Scurlock and Y. Yang 1124–1127

Diamagnetic properties of $YBa_2Cu_3O_{7-\delta}$ pre-sinte··d powders: critical current densities and a.c. losses
C. Rillo, F. Lera, R. Navarro, J. Bartolome, J. Flokstra and D.H.A. Blank 1128–1134

Superconducting magnetometers
C.D. Tesche 1135–1142

Laser doppler velocimeter measurements of thermal counterflow jet in He II
M. Murakami, T. Yamazaki and H. Nakai 1143–1147

Quench detection system of the EURATOM coil for the Large Coil Task (LCT)
G. Nother, S. Gauss, W. Maurer, L. Siewerdt, A. Ulbricht and F. Wuchner 1148–1153

Low temperature specific heat measurement of a carbon-carbon composite
G. Yang and A.D. Migone 1154–1155

Digital thermometer circuit for silicon diode sensors
P.C. Lanchester 1156–1159

Measurement of thermal noise by d.c.-SQUID
K.H. Brethel, T. Doehler and H. Koch W. Nawrocki, 160–1162

Split C–V measurements of the low temperature MOSFET inversion layer mobility
G.S. Gildenblat, C.L. Huang and N.D. Arora 1163–1166

Superconducting contracts for top-loading dilution refrigerators
L.G. Gunderson and R.C. Richardson 1167–1168

Thick film chip resistors as millikelvin thermometers
M.W. Meisel, G.R. Stewart and E.D. Adams 1168–1169

Disconnectable current leads for superconducting magnets
J. Chaussy and P. Gianese 1169–1171
Operation of a ^{3}He–^{4}He dilution refrigerator with a newly developed turbomolecular pump
K. Uhlig and W. Hehn 1171–1172

Conference reports

Second International Conference on Cryogenics (INCONCRYO 88), Calcutta, India, 6–10 December 1988
P. Sengupta 1025

Seventh Intersociety Cryogenics Symposium, Houston, Texas, USA, 23–25 January 1989
P.J. Kerney 945
Tiburon Conference on High Performance SQUID Systems, San Francisco, California, USA, 25–27 August 1988
R.L. Fagaly and C. Tesche 946

Book reviews

Advances in Cryogenic Engineering, Vol 33, edited by R.W. Fast
W. Lehmann 219
L.V. Shubnikov. His Life and Work. Selected Writings. Reminiscences
B.I. Verkin 1178

Conference previews

(Section in special conference issues including conference programme and exhibition preview)
1989 Cryogenics Engineering Conference/International Cryogenics Materials Conference, Los Angeles, California, USA, 24–28 July 1989, 768–792
